Webinar Wednesday! Kerry's Constants - Math Tips & Tricks

This course will offer a starting point to successfully begin the journey into water and wastewater mathematics. The class will provide tips, tricks, and formulas that an operator will use CONSTANTLY throughout their careers. This is the opportunity to learn from someone with 30+ years in the industry.

Instructor: Kerry Huss, Idaho Rural Water Association

CEUs: 0.1 Drinking Water/Wastewater

Cost: Free to IRWA Members / \$40 Non-Members

Confined Space Competent Person Certification Training - Ammon

Confined Space Competent Person Course Description: The course is designed to meet OSHA requirements for confined space competent person training. The course includes professional classroom theory instruction, participant handouts, final written exam, group activities, field exercises and practical evaluation.

Curriculum covers OSHA regulatory requirements including, identifying types of confined spaces; the specific risks and hazards of confined spaces, and emergency procedures so employee can perform duties assigned. Includes training on attendant, entrant, and entry supervisor duties. Participants will be trained in basic atmospheric testing procedures, general ventilation practices, and common entry procedures. Participants will be familiarized with prevention methods, and the duties and responsibilities of the Competent Person at a confined space entry site.

Confined Space Field Exercise and Practical Evaluation: Course includes construction site training on worker safety while performing confined space entry and non-entry rescue activities. Participants will practice making confined space rescues by simulating rescue operations in which they remove manikins or participants from a confined space.

What is a confined space: A confined space has the following characteristics: Its size and shape allow an employee to enter it, it has limited openings for participants to enter and exit, and it is not designed for continuous employee occupancy.

Who Should Attend: Required for employer designated Competent Persons. OSHA requires that there is a Competent Person present whenever workers enter a confined space. All workers who perform confined space work by supervising, entering, or are responsible for attendant non-entry rescue duties are recommended to attend.

IMPORTANT CONSIDERATIONS

Safety Equipment Required: Attending participants are required to bring a Hardhat, Safety Glasses, Work Gloves, Work Boots, Reflective Vest or Jacket and wear proper Work Clothing for participation in the confined space practical exercise.

Confined Space Equipment Recommended (if you can): Participating workgroups are encouraged to bring fall their protection harness, tripod, hoist, or entry system, and calibrated atmospheric monitor, and ventilation equipment for field exercise.

Completion Requirements: Participants are required to be present and actively participate in all learning activities including hands-on exercises and a written exam to receive certification. Employees will receive a certification of completion and a competent person card by actively participating in the course and demonstrating knowledge in the classroom and at the training exercise site.

Learning Aids: Participants should come prepared with a notepad and pen. Guides and handouts will be provided at the start of the course. The presentation and materials are in English (Spanish courses are available upon request).

Course Length: Approximately 8 hours including classroom theory followed by confined space field exercises. We will be covering a great deal of information in a short period of

time; your punctuality will be greatly appreciated.

Instructor: Northwest Safety & Risk Services

Continuing Education Units (CEUs) Available: 0.8 Drinking Water/Wastewater

Flow of Water - Coeur d'Alene

This course provides an overall view of the water and wastewater industry using the hydrological cycle as a comparison. It includes discussion on treatment technologies, storage, distribution and collections. This is a great class to inform boards, councils and the public about the importance of your utility's responsibilities. The course will be divided into three sections:

History of Water Treatment: Part 1

This course addresses when technologies were first discovered and how those technologies are used today. It also discusses whether those technologies can be applied to current treatment requirements. Topics include heat, UV, coagulation and colloidal silver treatments.

History of Water Treatment: Part 2

Explore early storage and distribution technologies and how they have led to today's systems. This course also examines whether those technologies can be applied to current treatment requirements. Topics include pipe types, corrosion control, valve types, tank and storage issues, and more.

History of Water Treatment: Part 3

Learn when chemical technologies were first discovered and how those technologies are still applied to today's treatment requirements. Topics include chlorine and its variations, ozone, fluoride, and chemical feed in general.

Instructor: John Schwartz, USABlueBook

Certification Math Review - Boise/Online

Do you need a little extra help with math? Do you have an exam coming up? Join Adrianna Cardoso from IRWA for math basics and applied problems.

Course Outline:

Review of materials and supplies needed for exam

How to use the provided formula sheets during your test

Math basics – units of measurement, fractions, decimals, percent

Common measurements in the wastewater and drinking water industry – volume, area, concentration, flow, pressure

Basic dimensional analysis problems – problem solving, strategies, resources and tools

Wastewater Collection I/II Certification Review - Coeur d'Alene & Online

This is a review course for operators preparing to take a Level I or II Wastewater Collections exam. This class is based off the ABC material that the Idaho Division of Occupational and Professional Licenses uses to create its licensing exams. You will receive handouts showing specific topics to study and go through example test questions for each topic. A breakdown of exam topics will be given.

Topics include:

- ? *Equipment operation, evaluation, and maintenance*
- ? *Lift station operation and maintenance*
- ? *Collection system monitoring, evaluation, and adjustment*
- ? *Wastewater operator safety, security, and administrative procedures*
- ? *Test taking tips and procedures*

Certification Math Review should be taken in conjunction with this course; this class does not include calculations.

Sacramento State training manuals are a sought-after resource for operators preparing for state certification. This training manual was developed to serve the needs of operators in a variety of ways, including: as a self-paced, independent-study distance learning course, and as a textbook in traditional college and university classes (often taught by experienced operators). The goal is to provide you with an understanding of basic operational and maintenance concepts for wastewater collection systems and with an understanding of basic collection systems and with the ability to analyze and solve problems when they occur. ?

If desired, the Operation and Maintenance of Wastewater Collection Systems textbooks - Volume 1 and Volume 2 are available for purchase at checkout for \$110 each

Instructor: Craig Sturman, Idaho Rural Water Association
Continuing Education Units (CEUs) Available: 0.6 Wastewater and Collection
Cost: \$120 - Sponsored by USDA

Water Distribution I/II Certification Review - Coeur d'Alene & Online

This is a review course for operators preparing to take a Level I or II Drinking Water Distribution exam. This class is based on the ABC material that the Idaho Division of Occupational and Professional Licenses uses to create its licensing exams. You will receive handouts showing specific topics to study and need-to-know criteria for each.

Topics include:

- *Drinking water distribution system components*
- *Equipment installation, operation, and maintenance*
- *Disinfection, monitoring, evaluation, and adjustment*
- *Laboratory process descriptions, sampling technique, and analysis*
- *Drinking water operator safety, security, and administrative procedures*
- *Public interaction*
- *Test-taking tips and procedures*

Students may purchase the AWWA training manual WSO Water Distribution, Grades 1 and 2 for \$100 at checkout. Manuals are recommended but not required.

This water operator education Series was designed by the American Water Works Association to address core test content on certification exams by operator certification type and certification grade level.

Instructor: Jeff Cook, Idaho Rural Water Association

Tondee Clark, (208) 343-7001
tclark@idrwa.org
Webinar Wednesday! Critical Application Solutions in Water & Wastewater - Online

Join us for an engaging one-hour training session where robust solutions for essential applications in water and wastewater treatment plants are introduced. Various applications focusing on solutions for automation, safety, and cost efficiency will be discussed. Instruction will also be given on the principles of operation, applications, benefits, and limitations of the following technologies: ultrasonic, non-contact radar, and pressure.

Key applications to be covered include:

- *Chemical tanks- The use of non-contact radar to create a safe environment for accurate level measurement for staff.*
- *Lift stations and pits- Overcoming ultrasonic and pressure devices, and less project management requirements.*
- *Grit traps and wash- Using automation to manage Grit.*
- *Pump room and pump monitoring and control- Pressure monitoring and flood protection in the pump room.*
- *Open channel flow- Obtaining influent/effluent flow rates for Flume and Weir.*

Fundamentals of SCADA & Telemetry - Twin Falls
Idaho DEQ Conference Room
650 Addison Ave West, Ste 110
Twin Falls, ID 83301
12:00 PM - 03:30 PM MST
Tondee Clark, (208) 343-7001
tclark@idrwa.org
Fundamentals of SCADA & Telemetry - Twin Falls

Fundamentals of SCADA and Telemetry is divided into three parts, each covering key aspects of modern SCADA systems.

Part 1 – High-Performance HMI introduces a design philosophy that enhances operator effectiveness, especially during abnormal situations. Developed by PAS Company in 2008 and now an industry standard, it emphasizes practices like hierarchical design, smart use of color, pattern recognition, and data contextualization, while also addressing operator ergonomics, control room layout, and managing change.

Part 2 – Secure in the Cloud focuses on Cloud-based SAAS concepts, emphasizing security from field systems to Cloud-resident SCADA servers. Participants will explore the benefits and risks of connected systems, addressing key questions about internet accessibility and security threats.

Part 3 – Overcoming Telemetry and SCADA Issues for Remote Sites offers tools and strategies for addressing connectivity challenges, environmental obstacles, and aging infrastructure. Demonstrations of cellular and radio telemetry systems provide scalable solutions to maintain reliability, reduce manual interventions, and enhance efficiency. This course blends technical insights, cost-effective strategies, and case studies to improve scalability and sustainability in water and wastewater monitoring systems.

Confined Space Competent Person Certification Training - Boise

Confined Space Competent Person Course Description: The course is designed to meet OSHA requirements for confined space competent person training. The course includes professional classroom theory instruction, participant handouts, final written exam, group activities, field exercises and practical evaluation.

Curriculum covers OSHA regulatory requirements including, identifying types of confined spaces; the specific risks and hazards of confined spaces, and emergency procedures so employee can perform duties assigned. Includes training on attendant, entrant, and entry supervisor duties. Participants will be trained in basic atmospheric testing procedures, general ventilation practices, and common entry procedures. Participants will be familiarized with prevention methods, and the duties and responsibilities of the Competent Person at a confined space entry site.

Confined Space Field Exercise and Practical Evaluation: Course includes construction site training on worker safety while performing confined space entry and non-entry rescue activities. Participants will practice making confined space rescues by simulating rescue operations in which they remove manikins or participants from a confined space.

What is a confined space: A confined space has the following characteristics: Its size and shape allow an employee to enter it, it has limited openings for participants to enter and exit, and it is not designed for continuous employee occupancy.

Who Should Attend: Required for employer designated Competent Persons. OSHA requires that there is a Competent Person present whenever workers enter a confined space. All workers who perform confined space work by supervising, entering, or are responsible for attendant non-entry rescue duties are recommended to attend.

IMPORTANT CONSIDERATIONS

Safety Equipment Required: Attending participants are required to bring a Hardhat, Safety Glasses, Work Gloves, Work Boots, Reflective Vest or Jacket and wear proper Work Clothing for participation in the confined space practical exercise.

Confined Space Equipment Recommended (if you can): Participating workgroups are encouraged to bring fall their protection harness, tripod, hoist, or entry system, and calibrated atmospheric monitor, and ventilation equipment for field exercise.

Completion Requirements: Participants are required to be present and actively participate in all learning activities including hands-on exercises and a written exam to receive certification. Employees will receive a certification of completion and a competent person card by actively participating in the course and demonstrating knowledge in the classroom and at the training exercise site.

Learning Aids: Participants should come prepared with a notepad and pen. Guides and handouts will be provided at the start of the course. The presentation and materials are in English (Spanish courses are available upon request).

Course Length: Approximately 8 hours including classroom theory followed by confined space field exercises. We will be covering a great deal of information in a short period of

time; your punctuality will be greatly appreciated.

Board & Council Training - Salmon

Salmon River Meadows Mutual Water

124 Quail Rd

Salmon, ID 83467

6:30 PM - 8:30 PM Mountain Time or 5:30 PM - 7:30 PM Pacific Time

Tondee Clark, (208) 343-7001

tclark@idrwa.org

Board & Council Training - Salmon & Online

This course is intended to assist with the financial, managerial and operational effectiveness of drinking water and wastewater systems. The information presented is based off of the US Department of Environmental Protection Agency (EPA) and Idaho Department of Environmental Quality (DEQ) policies along with regulations outlined in state code by the Idaho Administrative Procedure Act (IDAPA). The intent is to give elected officials or appointed board members an overview of regulations and requirements they must follow as they manage their community water and wastewater systems.

Subjects covered include: Open Meeting Laws and Requirements, Safe Drinking Water Act, American Water Infrastructure Act of 2018 (AWIA), Lead and Copper Rule Revision, Emerging Contaminants, 5th Unregulated Contaminant Monitor Rule (UCMR5), Planning for the Future, Common Challenges; Operator Requirements.

There are two more chances to take this training: Salmon River Meadows Mutual Water (9/13), and City of Fairfield (11/17). This is excellent training for board members, council members, clerks, public works directors, operators, and supervisors.

Webinar Wednesday! Fundamentals of Ductile Iron Fittings - Online

Online using Zoom - You will be sent the Zoom Meeting invitation in the confirmation email.

12:00 PM - 1:00 PM Mountain Time or 11:00 AM - 12:00 PM Pacific Time

Tondee Clark, (208) 343-7001

tclark@idrwa.org

Webinar Wednesday! Fundamentals of Iron Fittings - Online

This presentation will explore the fittings that are used in potable water systems, sewer force mains, and inside water and wastewater plants. You will learn the difference between ductile and gray Iron fittings. A quick review of the AWWA Standards along with responsibilities of ductile iron fitting manufacturers will be presented. The three basic ductile iron fitting product line offerings with their applications and AWWA Installation Techniques and the Most Common Linings & Coatings for Fittings will also be explained. Wedge type restraints and their application along with the different styles of valve boxes will covered, briefly. The presentation will conclude with frequently asked questions received by fitting manufacturers.

Instructor: Jack Lewis, Tyler Union

Flow of Water - Boise & Online

This course provides an overall view of the water and wastewater industry using the hydrological cycle as a comparison. It includes discussion on treatment technologies, storage, distribution and collections. This is a great class to inform boards, councils and the public about the importance of your utility's responsibilities. The course will be divided into three sections:

History of Water Treatment: Part 1

This course addresses when technologies were first discovered and how those technologies are used today. It also discusses whether those technologies can be applied to current treatment requirements. Topics include heat, UV, coagulation and colloidal silver treatments.

History of Water Treatment: Part 2

Explore early storage and distribution technologies and how they have led to today's systems. This course also examines whether those technologies can be applied to current treatment requirements. Topics include pipe types, corrosion control, valve types, tank and storage issues, and more.

History of Water Treatment: Part 3

Learn when chemical technologies were first discovered and how those technologies are still applied to today's treatment requirements. Topics include chlorine and its variations, ozone, fluoride, and chemical feed in general.

Instructor: John Schwartz, USABlueBook

Continuing Education Units (CEUs) Available: 0.6 Drinking Water/Wastewater

Cost: \$120 for IRWA Members / \$210 for Non-Members

2025 IRWA Fall Conference - Attendee Registration

Please join us October 1-2 at the Best Western Plus - University Inn, Moscow, Idaho for the 2025 IRWA Fall Conference. Please follow the following instructions when registering.

If you have never registered for IRWA training before, or forgot your login, please contact IRWA at (208) 343-7001 or office@idrwa.org for assistance BEFORE REGISTERING.

REGISTRATION INFORMATION

We are asking attendees to REGISTER FOR TRAINING WHEN YOU REGISTER FOR CONFERENCE. This will help us assign classrooms and 2025 Fall Conference continuing education units (CEUs) will be listed at your IRWA Member Dashboard. Please review the Registration Information Packet and decide which classes you would like to attend. You have a choice of 45 classes and four tours!

If you select a 2-hour class or tour, do not select any 1-hour classes during the same time period.

If you are attending all two days of Fall Conference please review all the training. If you are coming for one day, select the training ONLY on the day that you plan to attend.

If there is training that doesn't apply to you (and you don't need CEUs), you may choose to spend more time in the Exhibit Hall doing research. If that is the case, don't select a training option that time period.

Some training sessions have capacity limits, so REGISTER NOW!

When you arrive at conference, you will be given a copy of your schedule with the classes you selected and the name of the classroom.

Until September 17th, the EVENT CONTACT PERSON (the person who filled out the registration form) can edit training selections at their IRWA Member Dashboard using the Confirmation Number at the bottom of the Confirmation Email. Or contact IRWA Training Coordinator Tondee Clark at (208) 343-7001 and she can change your schedule.

If you are going to have a guest attend the conference with you, complete the first attendee registration and then select Add Another Attendee to This Registration. Add the information for the guest. The guest is welcome to attend the classes, exhibit hall, game night and eat IRWA-provided meals and snacks. They will not be able to earn continuing education units (CEUs).

If you have any questions, please contact IRWA Training Coordinator Tondee Clark (208) 343-7001 or tclark@idrwa.org.

Water Treatment I/II Certification Review - Boise & Online

This is a review course for operators preparing to take a Level I or II Drinking Water Treatment exam. This class will be taught in-person in Boise and online at the same time. This class is based off the ABC material that the Idaho Division of Occupational and Professional Licenses (DOPL) uses to create its licensing exams. You will receive handouts showing specific topics to study and need-to-know criteria for each.

Topics include:

- *Drinking water treatment methods*
- *Equipment operation and maintenance*
- *Source water characteristics*
- *Laboratory process descriptions, sampling technique, and analysis*
- *Drinking water operator safety, security, and administrative procedures*
- *Test taking tips and procedures*

Students may purchase the AWWA training manuals WSO Water Treatment, Grade 1 or WSO Water Treatment, Grade 2 for a discounted rate. Manuals are recommended but not required.

Instructor: Kerry Huss, Idaho Rural Water Association
Continuing Education Units (CEUs) Available: 0.6 Drinking Water
Cost: \$120 IRWA Members/\$210 Non-Members
Lunch is on your own.

Wastewater Collection I/II Certification Review - Boise & Online

This is a review course for operators preparing to take a Level I or II Wastewater Collections exam. This class is based off the ABC material that the Idaho Division of Occupational and Professional Licenses uses to create its licensing exams. You will receive handouts showing specific topics to study and go through example test questions for each topic. A breakdown of exam topics will be given.

Topics include:

- ? *Equipment operation, evaluation, and maintenance*
- ? *Lift station operation and maintenance*
- ? *Collection system monitoring, evaluation, and adjustment*
- ? *Wastewater operator safety, security, and administrative procedures*
- ? *Test taking tips and procedures*

Certification Math Review should be taken in conjunction with this course; this class does not include calculations.

Sacramento State training manuals are a sought-after resource for operators preparing for state certification. This training manual was developed to serve the needs of operators in a variety of ways, including: as a self-paced, independent-study distance learning course, and as a textbook in traditional college and university classes (often taught by experienced operators). The goal is to provide you with an understanding of basic operational and maintenance concepts for wastewater collection systems and with an understanding of basic collection systems and with the ability to analyze and solve problems when they occur. ?

If desired, the Operation and Maintenance of Wastewater Collection Systems textbooks Volumes 1 & 2 are available for purchase at checkout for \$110 each.

Instructor: Craig Sturman, Idaho Rural Water Association
Continuing Education Units (CEUs) Available: 0.6 Wastewater and Collection
Cost: \$120 IRWA Members / \$210 Non-Members

Hands-On Control Valves, Hydraulics and Operation Maintenance - Boise
Idaho Rural Water Association Technical Training Center
6395 W Gowen Rd
Boise, ID 83709

08:30 AM - 04:30 PM MST
Tondee Clark, (208) 343-7001
tclark@idrwa.org

Hands-On Control Valves, Hydraulics and Operation Maintenance - Boise
Engineers and operators alike will learn the “ins” and “outs” of hydraulic control valves. This discussion begins with basic hydraulics and how hydraulics automatically operate control valves to manage system pressure. The 6 hour hands-on session will demonstrate valve and pilot internals, troubleshooting, maintenance, and managing a complete control valve system.

Instructor: Patrick Miller and Raymond Velasquez, Cimco-GC Systems
Continuing Education Units (CEUs) Available: 0.6 Drinking Water
Cost: \$120 members / \$210 non-members
Lunch is not provided.

Water Distribution I/II Certification Review - Pocatello & Online

This is a review course for operators preparing to take a Level I or II Drinking Water Distribution exam. This class is based on the ABC material that the Idaho Division of Occupational and Professional Licenses uses to create its licensing exams. You will receive handouts showing specific topics to study and need-to-know criteria for each.

Topics include:

- *Drinking water distribution system components*
- *Equipment installation, operation, and maintenance*
- *Disinfection, monitoring, evaluation, and adjustment*
- *Laboratory process descriptions, sampling technique, and analysis*
- *Drinking water operator safety, security, and administrative procedures*
- *Public interaction*
- *Test-taking tips and procedures*

Students may purchase the AWWA training manual WSO Water Distribution, Grades 1 and 2 for \$100 at checkout. Manuals are recommended but not required.

This water operator education Series was designed by the American Water Works Association to address core test content on certification exams by operator certification type and certification grade level.

Instructor: Jeff Cook, Idaho Rural Water Association

Continuing Education Units (CEUs) Available: 0.6 Drinking Water

Cost: \$120 IRWA Members / \$210 Non-Members

tclark@idrwa.org

Disinfection A-Z - Boise & Online

?This class will explore one of the most important, yet complex, aspects of utility operations: disinfection. Why do we disinfect and how does the chemical process work? Learn all about chlorination, including why it is such a good disinfectant and how to improve your plant's chlorination process. Safety precautions will be included. A review of physical and chemical methods of disinfection will be provided. Discussion of operational considerations, testing procedures, and monitoring will also be covered. Finally, this class will cover dechlorination for both water and wastewater as well as alternative methods of disinfection. Come prepared to discuss problems and questions from your treatment plant! Find solutions and operational improvements to use during your daily procedures, maximize your treatment process, and meet regulations with ease.

Instructor: John Schwartz, USABlueBook

Continuing Education Units (CEUs) Available: 0.6 Drinking Water/Wastewater

Cost: \$120 for IRWA Members / \$210 for Non-Members

Tondee Clark, (208) 343-7001

tclark@idrwa.org

Board & Council Training - Fairfield & Online

This course is intended to assist with the financial, managerial and operational effectiveness of drinking water and wastewater systems. The information presented is based off of the US Department of Environmental Protection Agency (EPA) and Idaho Department of Environmental Quality (DEQ) policies along with regulations outlined in state code by the Idaho Administrative Procedure Act (IDAPA). The intent is to give elected officials or appointed board members an overview of regulations and requirements they must follow as they manage their community water and wastewater systems.

Subjects covered include: Open Meeting Laws and Requirements, Safe Drinking Water Act, American Water Infrastructure Act of 2018 (AWIA), Lead and Copper Rule Revision, Emerging Contaminants, 5th Unregulated Contaminant Monitor Rule (UCMR5), Planning for the Future, Common Challenges; Operator Requirements.

This is the last Board & Council Training of 2025. This is excellent training for board members, council members, clerks, public works directors, operators, and supervisors.

Instructor: Chris Johnson, City of Bellevue

Continuing Education Units (CEUs) Available: 0.2 Drinking Water

Cost: Free
